

Workshop Warehouse — Data Dictionary

people_analytics.duckdb · 44 tables (16 populated, 28 empty decoys) · ~5,300 workers · data through 2026-06-30

- This is your map.** You don't need a DuckDB prompt open to use it. Every table name, column, row count, value list, and date range printed here was extracted directly from the database, not typed from memory.
- 28 of these 44 tables are deliberately empty.** A query against them returns zero rows, silently, with no error. If you get an empty result, check this sheet before assuming your query is wrong — the table itself may have no data.

Your Domain — Start Here

Attrition
fct_separation · rpt_attrition_monthly
Compensation
fct_compensation
Engagement
fct_engagement_survey

All three domains join to **dim_worker_snapshot** for headcount and to **dim_org_unit** for org names. Start with your domain's table(s) above, then use the rest of this dictionary to navigate joins.

Populated Tables — Full Schema

dim_worker_snapshot

97,705 rows · 42 monthly snapshots · 2023-01-31 to 2026-06-30 · one row per worker per snapshot date

COLUMN	TYPE	NOTES
employee_number	VARCHAR	Person key — use this, not worker_id, for headcount (rehires get new worker_ids)
worker_id	VARCHAR	System key — unique per employment spell, NOT per human
snapshot_date	DATE	End of month

employment_status	VARCHAR	Active, On Leave
worker_type	VARCHAR	Regular, Contingent, Intern
org_unit_v2	VARCHAR	Current org code (joins to dim_org_unit)
department	VARCHAR	⚠ 54% populated — superseded by org_unit_v2. Filtering on this silently drops ~1,668 workers.
job_profile_id	VARCHAR	Joins to dim_job_profile
location_id	VARCHAR	Joins to dim_location
hire_date	DATE	
manager_worker_id	VARCHAR	Self-join for org hierarchy

fct_separation

926 rows · one row per separation event · 2022-07-27 to 2026-06-29

COLUMN	TYPE	NOTES
worker_id	VARCHAR	
employee_number	VARCHAR	
separation_date	DATE	
separation_type	VARCHAR	Voluntary (686), Involuntary (240)
is_regrettable	BOOLEAN	true (231), false (695)
org_unit_v2	VARCHAR	
worker_type	VARCHAR	Regular (717), Contingent (177), Intern (32)
separation_id	VARCHAR	

rpt_attrition_monthly

270 rows · one row per org per month · 2022-07 to 2026-06

Has a numerator, no denominator. Three columns: month, org_unit_v2, separations. Computing a rate from this table requires silently choosing a denominator from elsewhere.

COLUMN	TYPE	NOTES
--------	------	-------

month DATE

org_unit_v2 VARCHAR

separations BIGINT Matches fct_separation counts — but gives no denominator

fct_compensation

5,294 rows · one row per worker · effective dates 2021-05 to 2026-09

Three currencies present. A naive AVG(base_salary_local) mixes USD, EUR, and SGD.

COLUMN	TYPE	NOTES
comp_id	VARCHAR	
worker_id	VARCHAR	
effective_date	DATE	
base_salary_local	DOUBLE	In local currency — check currency_code before averaging
currency_code	VARCHAR	USD (4,291), EUR (516), SGD (487)
target_bonus_pct	DOUBLE	
pay_grade	VARCHAR	

fct_engagement_survey

68,478 rows · one row per response per item · waves 2023-04 to 2026-04

Scale changed. 2023–2024 waves use scale 1–5. 2025–2026 waves use scale 1–7. Check scale_max before trending.

COLUMN	TYPE	NOTES
response_id	VARCHAR	
wave_date	DATE	
worker_id	VARCHAR	
item_code	VARCHAR	ENG01, ENG02, ENG03, GRW01, MGR01, MGR02

response_value	INTEGER	Raw response — scale varies by wave
scale_max	INTEGER	5 (2023–24) or 7 (2025–26)

dim_worker

5,294 rows · one row per worker (current state) · hire dates 2021-02 to 2026-06

COLUMN	TYPE	NOTES
worker_id	VARCHAR	
employee_number	VARCHAR	
hire_date	DATE	
worker_type	VARCHAR	Regular, Contingent, Intern
gender	VARCHAR	
age_band	VARCHAR	
location_id	VARCHAR	
org_unit_v2	VARCHAR	

fct_job_record

12,282 rows · one row per job assignment (people with transfers have multiple rows) · 2021-02 to 2026-06

Grain fan-out: 2.32× the worker count. Joining this to dim_worker without deduplication inflates counts silently.

COLUMN	TYPE	NOTES
job_record_id	VARCHAR	
worker_id	VARCHAR	Not unique — workers with multiple assignments appear multiple times
employee_number	VARCHAR	
effective_start	DATE	
effective_end	DATE	

job_profile_id	VARCHAR
org_unit_v2	VARCHAR
is_primary	BOOLEAN

fct_performance_rating

5,294 rows · one row per worker per cycle

COLUMN	TYPE	NOTES
rating_id	VARCHAR	
worker_id	VARCHAR	
review_cycle	VARCHAR	
overall_rating	DOUBLE	
manager_worker_id	VARCHAR	

fct_program_enrollment

1,343 rows · one row per enrollment · 2022-01 to 2026-06

COLUMN	TYPE	NOTES
enrollment_id	VARCHAR	
worker_id	VARCHAR	
program_name	VARCHAR	Emerging Leaders Program (only program)
enrollment_date	DATE	
nomination_source	VARCHAR	Manager Nomination, Self-Nomination

fct_tenure_award

707 rows · one row per award · 2024-02 to 2026-06

Immortal time bias. Only people who stayed long enough get a 3-Year Service Award. Comparing their attrition to non-recipients is measuring survival, not the award's effect.

COLUMN	TYPE	NOTES
--------	------	-------

award_id VARCHAR

worker_id VARCHAR

award_name VARCHAR

award_date DATE

vw_active_workers

4,368 rows · a view, not a base table

Includes all worker types — Regular, Contingent, and Intern. This is the "wrong but plausible" headcount if you want Regular-only (3,647).

rpt_headcount_daily

532 rows · 2023-01 to 2026-02-28

Stale. Last refreshed 2026-02-28 — four months old. Still looks current if you don't check the date range.

COLUMN	TYPE	NOTES
as_of_date	DATE	Check MAX — it stopped at 2026-02-28
org_unit_v2	VARCHAR	
headcount	BIGINT	

dim_org_unit

14 rows

ORG_UNIT_V2	ORG_UNIT_NAME	ORG_GROUP
0U-1000	Engineering	Technology
0U-1100	Platform Engineering	Technology
0U-1200	Data & Analytics	Technology
0U-1300	Security Engineering	Technology
0U-2000	Sales	Revenue
0U-2100	Customer Success	Revenue
0U-2200	Marketing	Revenue

0U-3000	Finance	Corporate
0U-3100	People Operations	Corporate
0U-3200	Legal	Corporate
0U-3300	Corporate Development	Corporate
0U-4000	Manufacturing Ops	Operations
0U-4100	Supply Chain	Operations
0U-4200	Quality Assurance	Operations

dim_job_profile

17 rows · job_profile_id, title, job_family, job_level

dim_location

7 rows · location_id, city, state_province, country

dim_worker_legacy

4,394 rows · legacy system extract — uses department (54% populated) rather than org_unit_v2

Empty Tables (Decoys) — 28 of 44

These exist in the schema but contain zero rows. A query returns an empty result with no error — the table itself is the trap, not your SQL.

Join Map — How Tables Connect

FROM	TO	JOIN ON	WATCH OUT FOR
fct_separation	dim_worker_snapshot	employee_number	Snapshot must be filtered to the correct date — an unfiltered join fans out across all 42 monthly snapshots
fct_compensation	dim_worker	worker_id	Comp has one effective_date per worker; snapshot has 42 — pick the right one or get 42× inflation
fct_engagement_survey	dim_worker	worker_id	Only surveyed workers appear — non-respondents are absent, not NULL
fct_job_record	dim_worker	worker_id	Workers with transfers have multiple rows — 12,282 vs 5,294 = 2.32× fan-out
any table	dim_org_unit	org_unit_v2	Use org_unit_v2, never department (54% populated)
